Def: Discrete Mathematics

Definition (Discrete mathematics)

Discrete mathematics: study of countable, distinct, or separate mathematical structures.

Cf. Finite Mathematics vs. Discrete Mathematics vs. "Continuous Mathematics", including e.g., Calculus, Mathematical Analysis.

<u>Note</u>: Beyond the scope of this course: "Discontinuous Mathematics".

Example (Pixel)

Phones, computer monitors, televisions, modern screens, & Disney cartoons, animated films for kids & for adults, e.g., *Rick & Morty* (2013–).

Some Critical Thinking Questions

Targets/Audiences. Typical super-lazy mentally lost & thus unmotivated undergraduate/graduate students majored in Natural Science, especially in Mathematics, Information Technology, Computer Science, & Engineering.

Some purpose-driven questions

- *Why do undergraduate or graduate students need to learn mathematics in general?*
- *Which type of mathematics do undergraduate or graduate students need to learn according to their majors?*
- *Why do CS-major students need to study Discrete Mathematics in particular?*

Topics in Discrete Mathematics

- **Theoretical Computer Science**: areas relevant to computing, e.g., study of algorithms & data structures, computability, complexity theory, automata theory, formal language theory, computational geometry, computer image analysis, etc.

- **Information Theory**: quantification of information, coding theory, analog signals/coding/encryption, etc.

- **Mathematical Logic**: truth table, mathematical proof, automated theorem proving, formal verification of software, etc.

- **Set Theory**: (naive set theory, not axiomatic one) main focus: countable (finite, infinitely countable) sets.

- **Combinatorics**: enumerative combinatorics (counting problems), generating functions, partition theory, etc.
  Watch *The Man Who Knew Infinity* (2015).

UMT

Topics in Discrete Mathematics

- **Graph Theory**: study of graphs & networks, e.g., networks of communication, data organization, computational devices, flow of computation, etc.

- **Number Theory**: study of properties of (integer) numbers, e.g., cryptography, cryptanalysis.

- **Algebraic Structures**: discrete algebras, e.g., Boolean algebra used in logic gates & programming; relational algebra used in databases, etc.

- **Discrete Analogues of Continuous Mathematics**: discrete versions of continuous mathematics, e.g., discrete calculus, discrete probability theory, discrete optimization, discrete dynamical systems, etc.

- Others topics.

UMT

Motivations

- Learn Discrete Mathematics just for fun, to entertain yourself.

> **Example (*Good Will Hunting* (1997))**
>
> WILL HUNTING learned History, Sociology, Psychology Ψ, Advanced Mathematics, Combinatorial Discrete Mathematics to flirt hot girls in bars, & even Advanced Organic Chemistry for fun & to help her girlfriend.

- Learn "just enough" Discrete Mathematics to understand different branches of Computer Science.
  <u>Main Goal</u>: Focus strongly on writing programs, developing software, & building useful applications.

- If looking for research-oriented jobs, especially Theoretical Computer Science, then learn Discrete Mathematics much harder & deeper.
  <u>Main Goal</u>: Build some new useful theories, then find their theoretical- or practical real-world applications.

Teaching & learning methodologies

Targets/Criteria. precision, robustness, creativity, usefulness, applicability, proactivity, valuable insight, deep comprehension, passion, novelty.

Some goal-driven rules in learning, teaching, & research

(will be adjusted according to UMT IT Depart.'s objectives & visions)

- Bonus points for proposing creative problems &/or solutions.
- Special points for projects combining Math + CS (+ Physics, Chemistry, &/or Biology) much harder or more useful than lectures.

Important Note: Obviously, SciPy is not spicy at all like any chicken wings in *Hot Ones* show.

Recall from Elementary Mathematics Grade 10/combinatorics:

Problem (Permutation, arrangement, combination)

Given $n, k \in \mathbb{N}^\star$, $k \leq n$. *Write* Pascal/Python/C/C++ *programs to compute the numbers of permutations* P_n, *of arrangements* A_n^k, *of combinations* C_n^k.

Solution.

$P_n = n!, A_n^k = \dfrac{n!}{(n-k)!}, C_n^k = \dfrac{n!}{k!(n-k)!}$. Run `combinatorics.py`. $\square$

Combinatorics using `SciPy`: Problems

Problem (Pascal triangle & Newton binomial expansion)

Given $m, n \in \mathbb{N}^\star$. Write Pascal/Python/C/C++ *programs to print the 1st $n + 1$ lines of the Pascal triangle & Newton binomial expansion of $(a + b)^n, (a + b + c)^n, \left(\sum_{i=1}^{m} a_i\right)^n, \forall a, b, c, a_i \in \mathbb{R}, \forall i = 1, \dots, m$.*

Recall from Elementary Mathematics Grade 6/plane geometry:

Problem (Count number of lines formed by some points)

Write Pascal/Python/C/C++ *programs to count the number of lines formed by $n \in \mathbb{N}^\star$ distinguished points in (2D) plane.*

Problem (Count number of intersections formed by some lines)

Write Pascal/Python/C/C++ *programs to count the number of intersections of $n \in \mathbb{N}^\star$ distinguished lines in (2D) plane.*

Solution.

$C_n^2 - \sum_{i=1}^m C_{a_i}^2 + m = \dfrac{n(n-1)}{2} - \sum_{i=1}^m \dfrac{a_i(a_i-1)}{2} + m$ lines, where n given points is partitioned into exactly $m \in \mathbb{N}$ disjoint subsets A_i of collinear points, where $a_i := |A_i| = \operatorname{card} A_i, \forall i = 1, \dots, m$. $\qquad\square$

Solution.

Nếu trong n đường thẳng đã cho có đúng $m \in \mathbb{N}$ bộ lần lượt gồm $a_1, \dots, a_m$ đường thẳng song song đôi một & $k \in \mathbb{N}$ bộ lần lượt gồm $b_1, \dots, b_k$ đường thẳng đồng quy thì số giao điểm:

$C_n^2 - \sum_{i=1}^m C_{a_i}^2 - \sum_{i=1}^m C_{b_i}^2 + k$

$= \dfrac{n(n-1)}{2} - \sum_{i=1}^m \dfrac{a_i(a_i-1)}{2} - \sum_{i=1}^k \dfrac{b_i(b_i-1)}{2} + k.$ $\qquad\square$

Further & Beyond

More results, problems, & practical applications of Discrete Mathematics in Number Theory, Graph Theory, Generating Functions, Discrete Probability Theory, Asymptotics, etc.

Discrete Mathematics vs. DL $\subset$ ML $\subset$ AI

How can Discrete Mathematics be useful in Artificial Intelligence (AI), Machine Learning (ML), & Deep Learning (DL), especially Artificial Neural Networks (ANNs)?

All types of feedback & contributions are welcome.

Thanks

Thank You for your valuable time & attention.

I appreciate all.
